

Genitourinary cancer care is more complex than ever before. Science is unlocking new ways to attack prostate and bladder cancers. We have seen a rapid evolution in treatment options, precision medicine, and genomics, all of which translate into more promise for the patients.

There are challenges along the path to better care, necessitating advancements in care coordination and the creation of sub-specialization in urology.

Our commitment to patients, caregivers, and the urologists and multidisciplinary care teams who treat them goes beyond medicine.

All in for you – We're committed to help you achieve clinical and operational excellence to make a difference for the entire urology community.

**All in
urology**

Collaborating with you
through our urology-focused field
teams who understand your
unique needs

- We're continuing to learn how you navigate complicated decisions on behalf of your patients and their caregivers
- We're understanding the unmet needs and unique complexities faced by you and your patients and have specialized teams who understand your urology business and patient population
- We're connecting you — and your patients who are prescribed medications from Johnson & Johnson — with tailored tools, and resources to effectively address questions and needs

**Delivering operational and
clinical education**
tailored to urology practices

- We're seeking to collaborate with your care team and practice to help shape the future of genitourinary cancer care
- We're developing relationships with organizations to advance measurable standards of prostate and bladder care and to provide education on practice operations
- We're working together with members of your multidisciplinary care team to effectively address the most urgent needs for your patients with genitourinary cancer

**Investing in urology-specific
programs and resources**
to support you

- We're communicating with the urology community, patient care teams, and advocacy to understand needs in genitourinary cancer patient care
- We're committing to innovation in care and medicines across genitourinary cancers, from advanced prostate cancer today to new medicines tomorrow, including precision medicines and localized treatments for prostate and bladder cancers

We're **reimagining care** so your patients with cancer can **redefine living**.
